

Remote Sensing of Natural Resources and Infrastructure

Workflow Solutions

What can we do for you?

- We **classify data** and **generate models** for the monitoring of forests and environment, for risk assessment and infrastructure.
- We utilize **different data sources** (satellite, aircraft, UAV).
- We **acquire the data** by flying ourselves with our proprietary sensor platform, we can **use your data**, or we can **purchase data** for you from third party sources.

Why JOANNEUM RESEARCH?

- Airborne Data Acquisition and Mapping with JOANNEUM RESEARCH **Multisensor Platform ADAM**: Our platform guarantees synchronised sensor data from a range of sensors, according to your requirements.
- Data pre-processing and classification with our own **image-processing software RSG**: We can adapt the process chains to your specific requirements.
- Our process chains are always at the **highest possible methodological level** due to our research activities.

Customer Applications

- Forest inventory (local, national, global)
- Monitoring of alpine environment
- Pan-european forest mapping
- Tropical forest mapping

- Land slides
- Rock fall
- Surface subsidence mapping
- Flood events
- Forest fire mapping

- City models
- Corridor mapping (rail, road)
- Powerlines
- Pipelines

- Photogrammetry
- Laser scanning
- SAR interferometry
- Thematic processing lines

JOANNEUM RESEARCH

is a professional innovation and technology provider with a long track record in cutting-edge research at an international level.

The innovation company focuses on application oriented research and development projects to promote technology transfer to the economy.

DIGITAL

The Institute for Information and Communication Technologies is your trustworthy partner for applied high-tech solutions.
