Plastic Films in Mobility / Folien + Fahrzeug

NETWORKING

Expand your personal network

The Plastic Films in Mobility / Folien + Fahrzeug conference has been established for more than 15 years. It is dedicated to design and technology trends in automotive interiors and exteriors with smart electronics integration and innovative decoration technologies. Structural changes with the digitalization trend and the changes towards electromobility give new impulses to the film application possibilities and sustainability challenges require new and cooperative approaches to solutions by the industry and its supply chain.

The conference offers an optimal platform for your personal exchange, networking in the international and interdisciplinary expert audience and an industry wide overview of the main topics.

It will highlight all aspects of film technology along the entire value chain, from film production, the associated printing and film forming technologies, film injection molding technologies and other integration processes. The sustainability approach with the targeted...
