

MICRO-OPTICS IS...

Phabulous

Funding opportunity to implement free-form micro-optical components

PHABULOUS is the one-stop-shop for free-form micro-optics, taking designs and prototypes to large-scale manufacturing. We have launched our open call to support you with the implementation and integration of free-form micro-optics, to bring your product to volume markets.

This open call aims to support Europe's early adopters of our pilot line services to move towards volume production of free-form micro-optical components. Do you have a design and/or prototype and are looking to move your development into pilot or large-scale production?

**Take advantage of this opportunity and submit your application at:
www.phabulous.eu/open-call**

MICRO-OPTICS IS...

Phabulous

A full value chain to support you with your implementation process

PHABULOUS represents the full value chain and consists of Europe's leading companies and research and technology organisations in the field of micro-optics. As pilot line, we offer a full range of services from optical design and origination to pilot and volume production, including tooling, material selection and quality control. All synchronised to ensure a smooth and professional process to reduce lead times from several months to several weeks.
